CARTWALL

Fx and Jingle/liner playout

Cartwall is a software that allow to start immediate audio item.

It is dedicated for playing immediatly Jingle or effects.

Sevaral Bank can be defined to group the audio item collections

The playout is done on a "standart" audio card compatibel with the WDM directx of Windows.

The slot can be filled by drag&Drop form Zenon-Media database browser or directly from Windows Explorer.

Any format are accepted (linear, MP2, MP3,…). Also any Bitrate and sampling frequency can be playout.

Two working mode are possible:

- ▪ **Play on clic:**
  Direct play of the item on clic. This is usefull when using with a touch screen or dedicated keyboard.

- ▪ **Select on clic:**
  Preselect one or more item, Play/Stop command are done by external GPI Fader start/Stop

Each slot can be associated to an external GPI for start command.

Each bank can be locked by password to control the use of th included audio items.
